

Cloud E-mail Services

SIMPLY GOOD NEWS

Spam Filtering

No more spam - without hardware, software and effort

The advantage of a spam filter seems to be simple - to keep all unwanted emails from arriving at your own mail server. The Hornetsecurity Managed Spamfilter Service offers much more. The most valuable benefits at a glance.

Protection against malicious emails

The spam filter service offers the highest detection rates in the market with a guaranteed spam detection of 99.9% and a virus detection of 99.99%. It protects the mail server from DDoS attacks and users from phishing emails. Over 95% of all spam is blocked upon arrival – as a result, the quarantine remains clear and easy to manage.

Protecting legitimate email traffic

Should the email server of our customer be unavailable, incoming emails will be stored for up to 7 days, and will be delivered automatically when the server comes back on. With the optional continuity and email archive services, customers will always be able to receive, send and archive emails in a manner that ensures data integrity.

Easy use

The best news for end users: Spam is filtered out safely and automatically. Should a message land in quarantine by mistake, it can be restored with just one click directly from the concise spam report. The spam reports can be delivered at times that are tailored to your requirements.

Transparency and monitoring

The spam filter service offers companies the option to lay down the rules for the use and monitoring of emails as a means of communication. For this to happen, a high level of transparency and control is needed. These requirements allow Hornetsecurity to use a role-based rights management system to collect large amounts of statistical email data and track live emails.

Easy management

The spam filter service is a fully managed solution, i.e. administrators no longer have to worry about installations, updates and monitoring because management and operations are handled by Hornetsecurity. The web-based control panel can be used to maintain an email footer and to define policies easily and centrally.

E-Mail Continuity

Secure your email traffic: The Email Continuity Service protects your email system effectively from outages.

The email system is down, mails cannot be sent or received any longer. For such an emergency case the Continuity Service is the ideal stand-by system. Activated within seconds, the service keeps your email traffic running.

High availability of mail traffic

Power outages, hard disk crashes or other damage – there are many causes for email traffic breakdowns. It is important, that alternative solutions are available that kick-in in case of emergencies, so as to ensure that no emails are lost and that employees can continue sending and receiving messages.

Compliance, transparency and control

Always retaining an overview is important – this is especially true for email traffic. A high level of transparency of the incoming and outgoing message flow helps tremendously. However, data privacy must always be complied with.

Easy management

The continuous availability of email traffic through additional services such as the Continuity Service by Hornetsecurity is set up in a matter of seconds. Basically, separate management is not necessary since the service kicks in automatically should the email infrastructure break down.

Easy use

It's great, when employees can continue working without interruption when the mail server infrastructure is down. Easy application of the alternatives is crucial. The Continuity Service by Hornetsecurity provides users with suitable options.

E-Mail Archiving

No compromises – fully automated, 100 % archiving at affordable costs

Legally compliant and audit-proof archiving of emails without administration effort but easy access to the data - thanks to Hornetsecurity.

Secure storage

Business emails often include sensitive content that cannot afford to be lost – for legal reasons, but also simply so that it can be accessed again in the event of a query. Automatic and secure email storage is indispensable for this.

Compliance, transparency and control

Business emails are subject to the same legal requirements as traditional letters. They must be stored for a particular period of time, and kept available so that auditors can access the emails at any time.

Easy management

It only takes a few clicks to manage Aeternum – no matter whether you are importing or exporting emails, or configuring the basic settings for the archive period. This saves time for IT staff and, consequently, reduces costs.

Easy search and retrieval of emails

It can be difficult to keep track of the daily flood of emails. Easily finding and restoring messages to your inbox not only requires good search algorithms, but also the option to limit and refine search results using a variety of parameters.

E-Mail Encryption

Secure email communication fully automatic and made easy with Hornetsecurity

A secure email communication is getting more and more important – a comfortable management and usability is a must, too. The Hornetsecurity Email Encryption Service connects both arguments with each other in one solution.

Protection against spying

Business emails often contain internal company information, personal data or other sensitive content that must especially be protected against spying. A strong encryption solution will help with this.

Compliance, transparency and control

Implementing email encryption in a company always involves defining rules and policies at a central point, but also being able to quickly obtain an overview of all encrypted email traffic at any time.

Easy management

Hornetsecurity provides IT administrators with numerous options for making email traffic as straightforward as possible to encrypt and manage.

Easy use

Hornetsecurity's cloud-based encryption technology takes administration out of end users' hands, removing the need for them to deal with it at all.

Hornetsecurity Advanced Threat Protection (ATP)

Detect and prevent highly complex and sophisticated attacks - effectively and in real time.

A secure email communication is getting more and more important – a comfortable management and usability is a must, too. The Hornetsecurity Email Encryption Service connects both arguments with each other in one solution.

Protection against ransomware

Protection against blended attacks

Protection against targeted attacks

Protection against digital espionage

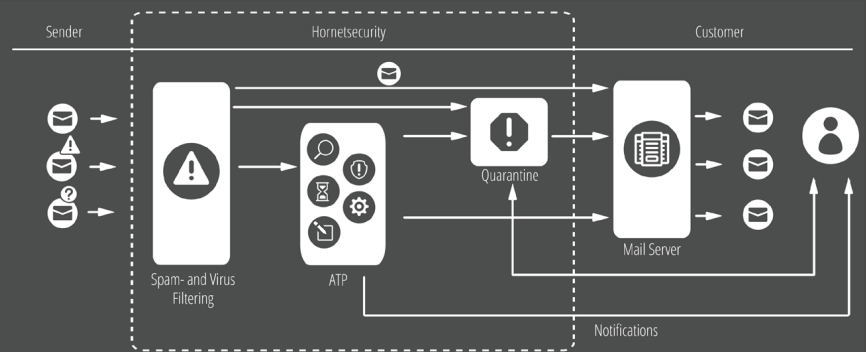

Notification of attacks

Integration of Hornetsecurity ATP into email security management.

Hornetsecurity ATP integrates seamlessly into spam and virus filters. Emails that have passed this first test are subjected to further analysis by Hornetsecurity ATP. Among other things, the service executes attachments and observes their behaviour in detail.

About InternetNow!

InternetNow!

InternetNow is the name to rely upon for e-mail consultancy. We started our business in 1999 by developing MailNow!, a corporate e-mail server software. The product won the "Best Software Merit Award" at APMITTA 2000.

Our R&D department has since developed various e-mail related products including ProtectNow! (an e-mail filtering solution) and Armadillo (a spam filtering appliance).

Having ventured into providing cloud-based services in 2010, it was only natural for us to do the same with our e-mail solutions. In fact our existing expertise in the e-mail domain makes us the perfect partner for Hornetsecurity.

About Hornetsecurity

Hornetsecurity is a provider premium of cloud e-mail services. Our services provide perfect and safe Internet communication without investments into hardware or software and totally free of administration or maintenance efforts for IT managers and users.

Our customers are companies of all sizes: Starting from small and medium-sized companies to large enterprises. In fact some of the biggest names in Europe are putting their trust in our hands to take care of the security of their e-mail systems.

Our headquarter is located in Hannover, Germany. Our services are being generated via several data centers in Europe.
